

## PE Civil Exam 80- Water Resources and Environmental Questions \& Answers (pdf Format) For Depth Exam

PE Civil Depth Exam:This practice exam contains 80 -questions and answers from all Water Resourcesand Environmental.
Table Contents: Number of Problems ..... Page
I. Analysis and Design ..... 8 ..... 4
II. Hydraulics-Closed Conduit 11 ..... 11 ..... 13
III. Hydraulics-Open Channel 8 ..... 25
IV. Hydrology 13 ..... 37
V. Groundwater and Wells ..... 6 ..... 55
VI. Wastewater Collection and Treatment ..... 12 ..... 62
VII. Water Quality ..... 6 ..... 74
VIII. Drinking Water Distribution and Treatment 14 ..... 80
IX. Engineering Economics Analysis ..... 2 ..... 93
Total
80 Problems
I. Analysis and Design -8 Solved Problems
A. Mass balance
B. Hydraulic loading
C. Solids loading (e.g., sediment loading, sludge)
D. Hydraulic flow measurement
(Ref:NCEES)
8. PROBLEM (Hydraulic flow measurement)

A venturi flow meter of the following figure, upstream diameter is 0.2 meter, and downstream diameter is 0.12 meter. The pressure difference, $\Delta \mathrm{P}=\mathrm{P} 1-\mathrm{P} 2=200 \mathrm{kPa}(2 \times 105 \mathrm{~N} / \mathrm{m} 2)$ between upstream and downstream. It has used for kerosene; specific gravity of kerosene is 0.83. Calculate the mass of the flow.

A. $\quad 80.00 \mathrm{~kg} / \mathrm{sec}$
B. $\quad 70.00 \mathrm{~kg} / \mathrm{sec}$
C. $\quad 45.00 \mathrm{~kg} / \mathrm{sec}$
D. $\quad 60.00 \mathrm{~kg} / \mathrm{sec}$

## 8. SOLUTION:

Where,
Upstream diameter is 0.2 meter and downstream diameter is 0.12 meter.
Density of kerosene, $\rho=0.83\left(1000 \mathrm{~kg} / \mathrm{m}^{3}\right)=830 \mathrm{~kg} / \mathrm{m}^{3}$

Upstream and downstream area:

$$
A_{1}=\pi / 4 \times(0.2)^{2}=0.0314 m^{2}
$$

$\mathrm{A}_{2}=\pi / 4(0.12)^{2}=0.0113 \mathrm{~m}^{2}$

Flow, $\mathrm{Q}=\mathrm{A}_{2}\left[2 \Delta \mathrm{p} / \rho\left(1-\left(\mathrm{A}_{2} / \mathrm{A}_{1}\right)^{2}\right)\right]^{1 / 2}$
For a pressure difference, $\Delta \mathrm{P}=200 \mathrm{kPa}=2 \times 10^{5} \mathrm{~N} / \mathrm{m}^{2}$
1 Newton/meter ${ }^{2}=0.101$ kilogram-force/meter ${ }^{2}$
$\mathrm{Q}=(0.0113)\left[2\left(2 \times 10^{5} \times 0.101\right) /(830)(1-((0.0113) /(0.0314)\right.$
$\left.\left.)^{2}\right)\right]^{1 / 2}$
$\mathrm{Q}=(0.0113)[2(200000 \times 0.101) /(830)(1-0.13)]^{1 / 2}$
Flow, $\mathrm{Q}=0.084 \mathrm{~m}^{3} / \mathrm{sec}$

Mass of flow, $m=Q \rho$
$=\left(0.084 \mathrm{~m}^{3} / \mathrm{s}\right)\left(830 \mathrm{~kg} / \mathrm{m}^{3}\right)$
$=70.0 \mathrm{~kg} / \mathrm{sec}$

The Correct Answer is: (B)

## II. Hydraulics-Closed Conduit - 11 Solved Problems

A. Energy and continuity equation (e.g., Bernoulli, momentum equation)
B. Pressure conduit (e.g., single pipe, force mains, HazenWilliams, Darcy-Weisbach, major and minor losses)
C. Pump application and analysis, including wet wells, lift stations, and cavitation
D. Pipe network analysis (e.g., series, parallel, and loop networks) (Ref:ncEES)

## 11. PROBLEM (Bernoulli)

What is the total head at point $Y$ fromthebase of the bottom reservoir datum? The pump discharge is $5.0 \mathrm{ft}^{3} / \mathrm{sec}$, where $\mathrm{r}_{\mathrm{w}}=62.4 \mathrm{lbs} / \mathrm{ft}^{3}$ and the Specific Gravity of Mercury=13.6.

A. $\quad 65.0 \mathrm{ft}$
B. $\quad 55.0 \mathrm{ft}$
C. $\quad 40.0 \mathrm{ft}$
D. $\quad 75.0 \mathrm{ft}$

## 11. SOLUTION:

Where, $\mathrm{Q}=5.0 \mathrm{ft}^{3} / \mathrm{sec}$
Pressure head $=\mathrm{P} / \mathrm{g}$, Velocity Head $=\mathrm{V}^{2} / 2 \mathrm{~g}$, Elevation Head $=\mathrm{z}$
Total Head point, $\mathrm{Y}=\mathrm{z}+\mathrm{Vy}^{2} / 2 \mathrm{~g}+\mathrm{Py} / . \mathrm{g}$
Velocity for delivery Pipe, $\mathrm{Vy}=\mathrm{Q} / \mathrm{A}=\mathrm{Q} /\left[\mathrm{n} / 4\left(\mathrm{~d}^{2}\right)\right]$
$=5 /\left[(3.14 / 4)(6 / 12)^{2}\right]=25.47 \mathrm{ft} / \mathrm{see}$
Total Head at Point $\mathrm{Y}=\mathrm{z}+\mathrm{Vy}^{2} / 2 \mathrm{~g}+\mathrm{Py} / . \mathrm{g}$
$=(15+10+30)+(25.47)^{2} /(2 \times 32.2)+0=65.07 \mathrm{ft}$
The Correct Answer is: (A)

## 19. PROBLEM (Pump)

A Pump operating discharge is 62 GPM of water with a head of 120 ft . What are the Brake Horsepower (BHP) of the pump and Net Positive Suction Head (NPSH) available at the suction port to avoid pump cavitation, using the following pump curve?

Net Positive Suction Head (NPSH)
Brake Horsepower (BHP)
A. 6.0
3.6
B. 5.5
4.3
C. 5.0
4.5
D. 6.0
5.0

## 19. SOLUTION:

Where, $\mathrm{Q}=62$
GPM Head,
$\mathrm{H}=120 \mathrm{ft}$

From the graph, corresponding of duty point 62 GPM @ 120 ft heads would require 6 feet of NPSH required at the suction port to avoid cavitations and pump have 3.6 (BHP) Brake Horsepower.

Note: 2 feet of extra NPSH required at the suction flange to avoid any problems at the duty point.

The Correct Answer is: (A)
31. PROBLEM (Runoff analysis)

Determined Average Runoff Coefficient, "C" as shown in the Figure, which is the runoff, contributes to a collector.

A. 0.51
B. 0.45
C. 1.60
D. 0.48
31. SOLUTION:
$\mathrm{A}_{1}=4 \mathrm{ac}, \mathrm{C}_{1}=0.38, \mathrm{t}_{1}=20 \mathrm{~min}, \mathrm{~A}_{2}=2 \mathrm{ac}, \mathrm{C}_{2}=0.58$,
$\mathrm{t}_{2}=12 \mathrm{~min}, \mathrm{~A} 3=3 \mathrm{ac}, \mathrm{C} 3=.64, \mathrm{t} 3=15 \mathrm{~min}$
$\mathrm{C}=(\mathrm{C} 1 \mathrm{~A} 1+\mathrm{C} 2 \mathrm{~A} 2+\mathrm{C} 3 \mathrm{~A} 3) /(\mathrm{A} 1+\mathrm{A} 2+\mathrm{A} 3)$
$=(4 \times .38+2 \times .58+3 \times .64) /(4+2+3)=0.51$

The Correct Answer is: (A)

## 56. PROBLEM (Wastewater treatment processes)

A primary influent flow rate, $\mathrm{Q}_{\mathrm{o}}=12$ MGD of the Figure an activated sludge treatment plant. The plant biochemical oxygen demand (BOD) concentration is $S_{o}=170 \mathrm{mg} / \mathrm{L}$, suspended solids concentration, $\mathrm{X}_{\mathrm{o}}=200 \mathrm{mg} / \mathrm{L}$ and volumetric loading, $\mathrm{VL}=34 \mathrm{lbs}$ BOD/day/ $1000 \mathrm{ft}^{3}$. Determine the sludge retention time (SRT).
A.
12.0 hrs .
B.
8.75 hrs.
C.
6.50 hrs .
D.
7.50 hrs .

Activated sludge flow Diagram

## 57. SOLUTION:

Where,
Primary influent flow rate, $\mathrm{Q}_{\mathrm{o}}=12 \mathrm{MGD}$,
BOD concentration, $S_{o}=170 \mathrm{mg} / \mathrm{L}$
Suspended solids concentration, $X_{o}=200 \mathrm{mg} / \mathrm{L}$
Design volume lodging, $\mathrm{VL}=34 \mathrm{lbs}$ BOD/day/ 1000
$\mathrm{ft}^{3}$ Volume of aeration Tank,
$V=\{[(8.34 \times$ So $\times$ Qo $)] /[V L \times(1000)]\} \times 1,000,000$
$V=\{[(8.34 \times 170 \times 12)] /[34 \times(1000)]\} \times 1,000,000=500400$
$\mathrm{ft}^{3}$ Volume of aeration Tank in MG,
$\mathrm{V}_{\mathrm{MG}}=(\mathrm{V} \times 7.48) / 1,000,000=(500400 \times 7.48) / 1,000,000=3.74 \mathrm{MG}$

Sludge retention time $(S R T)=24 \times \mathrm{VmG}^{\text {/ Qo }}$
Sludge retention time $(S R T)=24 \times 3.74 / 12=7.48 \mathrm{hrs}$.
The Correct Answer is: (D)

## IX. Engineering Economics Analysis- 2 Solved Problems

Economic analysis (e.g., present worth, Life Cycle Cost, comparison of alternatives)
79. PROBLEM (Economics Analysis)

You are incharge of a sewer treatment upgrade construction project. The project has budgeted $\$ 2.0$ million (BAC) with duration of 20 months.

After 10 months, the project has reported the following figure: Planned Cost, PV= \$1.0 M
Actual Cost, $\mathrm{AC}=\$ 800 \mathrm{~K}$
Earn Value, EV=\$850K

The project would not make any difficulties and complete without any hiccups. What is the Estimate at Completion (EAC) of the project?
A. $\$ 2.33 \mathrm{M}$, Over Budget
B. $\$ 1.88 \mathrm{M}$, Under Budget
C. $\$ 2.00 \mathrm{M}$, At Budget
D. \$1.55 M, Under Budget

## 79. SOLUTION:

Where,
Budgeted Cost, BAC=\$2.0
M Planned Cost, PV=\$1.0
M Actual Cost, $\mathrm{AC}=\$ 900 \mathrm{~K}$
Earn Value, EV $=\$ 950 \mathrm{~K}$

Cost performance Index, CPI = EV / AC
$\mathrm{CPI}=\mathrm{EV} / \mathrm{AC}=950 / 900=1.06$, project is under spent.

Estimate at Completion, $\mathrm{EAC}=\mathrm{BAC} / \mathrm{CPI}=2.0 / 1.06=\$ 1.88 \mathrm{M}$, Under Budget

The Correct Answer is: (B)

## 80. PROBLEM (Economics Analysis)

A running construction project is an investment of $\$ 200,000$. The project has forecasted to create revenues of $\$ 50,000$ in the first year after the end of the project and of $\$ 80,000$ in each of the two following years.
What is true for the net present value (NPV) of the project over the three years cycle at a discount/interest rate of $12 \%$ ?
A. The project NPV is positive that create the attractive.
B. The project NPV is positive, that create the unattractive.
C. The project NPV is negative, that create the attractive.
D. The project NPV is negative, that create the unattractive.

## 80. SOLUTION:

Calculating Present Values, $P V=F V /(1+r)^{n}$ Where, Future Value=FV, Interest rate=r, and $n=$ number of year NPV=SUM(PV)

Construction project

|  |  |  | Cash inflow, <br> Cresent value |  |  |  |  |
| :---: | :--- | :--- | :--- | ---: | ---: | ---: | ---: |
|  |  | Cash inflow, <br> future values | PV | NPV |  |  |  |
| Interest | period | 0 | $\$ 200,000.00$ | $\$ 0.00$ | $-\$ 200,000.00$ | $-\$ 200,000.00$ | $-\$ 34,639.21$ |
| $12 \%$ | Year | 1 |  | $\$ 50,000.00$ | $\$ 50,000.00$ | $\$ 44,642.86$ |  |
|  | Year | 2 |  | $\$ 80,000.00$ | $\$ 80,000.00$ | $\$ 63,775.51$ |  |
|  | Year | 3 |  | $\$ 80,000.00$ | $\$ 80,000.00$ | $\$ 56,942.42$ |  |

Revenue (3yrs)=
\$210,000.00
Net revenue (3yrs)=

The Correct Answer is: (D)
